Risk and Reward Profile

Synthetic Indicator indicatively shows the volatility of the Fund's profitability: the higher this indicator, the higher the potential reward; at the same time it involves a higher risk to suffer losses. The lowest category of the indicator does not mean that the investments in the Fund are not exposed to risk.

The Fund belongs to risk and reward category 6, because its historical annualized volatility has been high (between 15% and 25%). The specified risk category may shift over time and its current value does not guarantee a similar risk and reward ratio in future.

Significant risks not included in determining the synthetic indicator are as follows:

Operational risk. A possibility that the value of the Fund's assets decreases due to an error of our employees or systems, incomplete internal processes or controls, which may result in a reduction of your investment value.

Liquidity Risk. A possibility that due to economic, market or other conditions the sale of financial instruments in the desired time is problematic. Low liquidity can have an adverse effect on the value of financial instruments that in turn may result in a reduction of your investment value.

Counterparty Risk. A possibility that a counterparty defaults on its obligations towards the Fund that in turn may result in a reduction of your investment value.

Event risk. A possibility to suffer losses due to unforeseeable events, e.g., political developments, changes in taxes, nationalisation, sanctions, devaluation, etc., which may negatively affect your investment value.
